

# De'Jour Ford

## Front-End Developer

### SUMMARY

As a creative and detail-oriented software engineer, I have a deep interest in front-end development. I have a proven track record of designing, developing, and deploying successful websites with great visual design. I am now looking to bring my skills to a tech company with global reach, where I can continue to push the boundaries of front-end development and help create exceptional user experiences.

### WORK EXPERIENCE

#### Software Engineer at 100devs | Los Angeles, CA

June 2022 — Present

- Collaborated with a team of developers to build modern and responsive web applications using best practices
- Built semantically structured full stack web applications
- Applied agile methodologies like SCRUM for project management

#### Recent Projects:

**De'Jour E-Commerce Site** – I developed a responsive e-commerce site using HTML, CSS, and Javascript. The site allows the client to browse different categories of products and view their details. Additionally, clients can add items to their shopping cart, which can be viewed and modified as needed.

**CarMe Rental Car Website** – I created a responsive car rental website with multiple pages using HTML, CSS, and Javascript. The layout was designed using both flexbox and grid to ensure an optimal viewing experience on any device. By utilizing DOM manipulation, clients can dynamically view car options and their details, making the rental process more efficient and user-friendly.

**Septien Entertainment Agency Website** - I designed and developed a fully responsive website for a local singing agency as a prototype for approval. The site was created using HTML, CSS, and Javascript, with the addition of FontAwesome for iconography. The end result is a sleek and modern website that effectively showcases the agency's services and talent to potential clients.

**NBA Team's Best Player App** - The full stack app I developed allows clients to search for a basketball team by name and receive an image and text of the team's best player, displayed in the DOM. The app was built using REST API and Express, and is hosted on Heroku. This app provides a user-friendly and informative experience for basketball enthusiasts and fans alike.

#### Senior Pharmacy Technician at Walgreens | Denton, TX

August 2013 — December 2022

As a senior pharmacy technician, I was responsible for filling, entering, and processing new prescriptions for patients. Additionally, I provided training and support for new and less experienced technicians within the pharmacy, utilizing Intercom Plus to ensure effective communication. I also played a key role in inventory management and maintaining pharmacy compliance to ensure the highest level of patient care and safety.
